1 Extending Java for high-level Web service construction   ■

Aske Simon Christensen, Anders Møller, Michael I. Schwartzbach
November 2003 **ACM Transactions on Programming Languages and Systems (TOPLAS)**,
Volume 25 Issue 6

Full text available: 📄 pdf(947.02 KB)   Additional Information: full citation, abstract, references, citings, index terms

We incorporate innovations from the <bigwig> project into the Java language to provide high-level features for Web service programming. The resulting language, JWIG, contains an advanced session model and a flexible mechanism for dynamic construction of XML documents, in particular XHTML. To support program development we provide a suite of program analyses that at compile time verify for a given program that no runtime errors can occur while building documents or receiving form input, and ...

Keywords: Interactive Web services, XML, data-flow analysis

2 DDD papers: Domain driven web development with WebJinn   ■

Sergei Kojarski, David H. Lorenz
October 2003 **Companion of the 18th annual ACM SIGPLAN conference on Object-oriented programming, systems, languages, and applications**

Full text available: 📄 pdf(266.32 KB)   Additional Information: full citation, abstract, references, index terms

Web application development cuts across the HTTP protocol, the client-side presentation language (HTML, XML), the server-side technology (Servlets, JSP, ASP, PHP), and the underlying resource (files, database, information system). Consequently, web development concerns including functionality, presentation, control, and structure cross-cut, leading to tangled and scattered code that is hard to develop, maintain, and reuse. In this paper we analyze the cause, consequence, and remedy for this cros ...

Keywords: JSP, adaptability, aspect-oriented programming (AOP), crosscutting concerns, dynamic pages, generative programming, inter-crosscutting, intra-crosscutting, model-view-controller (MVC), reusability, scattering, struts, tangling, web application, web development, web programming

3 A template-based approach to XML parsing in C++   ■

John Dubchak
June 2003 **Linux Journal**, Volume 2003 Issue 110

Full text available: 📄 html(13.51 KB)   Additional Information: full citation, abstract, index terms

Add XML support to your project with the Apache Software Foundation's Xerces parser and some C++ code.

1 Application of XML tools for enterprise-wide RBAC implementation tasks   ■
Ramaswamy Chandramouli
July 2000 **Proceedings of the fifth ACM workshop on Role-based access control**

Full text available: 📄 pdf(66.85 KB)   Additional Information: full citation, abstract, references, citings, index terms

The use of Extensible Markup Language (XML) and its associated APIs, for information modeling and information interchange applications is being actively explored by the reseach community. In this paper we develop an XML Document Type Definition (DTD) for representing the schema of a Role-based Access Control (RBAC) Model and a conforming XML document containing the actual RBAC-based access control data for a commercial banking application. Based on this DTD, the XML document and the methods ...

2 Web-based tools, systems and environments: An approach to lightweight deployment   ■
of web services
J. Gergic, J. Kleindienst, Y. Despotopoulos, J. Soldatos, G. Patikis, A. Anagnostou, L. Polymenakos
July 2002 **Proceedings of the 14th international conference on Software engineering and knowledge engineering**
Full text available: 📄 pdf(296.74 KB)   Additional Information: full citation, abstract, references, index terms

Web Services is gradually becoming the most popular distributed computing paradigm for the Internet. Although several vendor and research efforts are in progress, fully-fledged deployment of Web Services in a wide scale has not been accomplished yet. The present contribution describes a framework for lightweight deployment of Web Services. This framework can be seen as a contribution to a smooth transition step towards a complete large-scale deployment. The paper starts with a description of dat ...

3 P8: DITA XML: a reuse by reference architecture for technical documentation   ■
Michael Priestley
October 2001 **Proceedings of the 19th annual international conference on Computer documentation**

Full text available: 📄 pdf(192.61 KB)   Additional Information: full citation, abstract, references, citings, index terms

The Darwin Information Typing Architecture is an XML architecture for producing and reusing technical information. DITA promises the following:

- Scalable reuse, so you can reuse content in any number of delivery contexts simultaneously without complicating the source
